IFRS 17 Programme	
Session 1	Recap: Core model and premium allocation approach (PAA)
Session 2	PAA with comparison to unearned premium
Session 3	Challenges in applying PAA
Session 4	Disclosure and presentation requirement
Session 5	Transition, transition presentations and disclosures
Session 6	Audit reports and compliance with IFRS
Session 7	

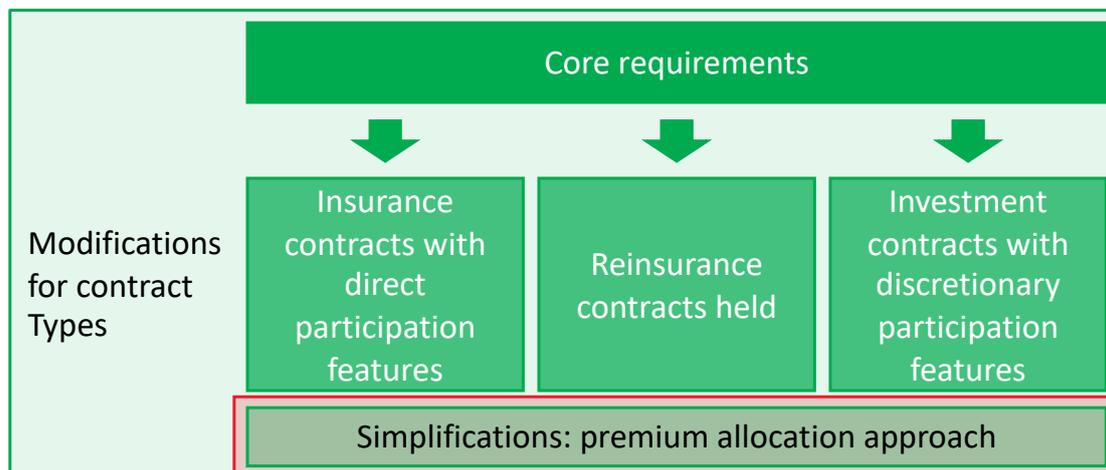

5

6

Core Requirements

Snapshot of IFRS 17 Approaches

7

7

When should contracts be separated?

General rule of separation

Not explicit in IFRS 17, discussed at **TRG**:

- » Lowest unit of account is the contract (includes all components)
- » Contract with legal form of single contract generally considered a single contract
- » Separation could be appropriate if legal form does not reflect substance of contractual rights and obligations
- » Assessment of all facts and circumstances, not policy choice
- » Reinsurance contract held: fact that underlying contracts are included in different groups is not sufficient to conclude that accounting as a single contract does not reflect its substance

TRG February 2018, Paper 1

8

8

When do you separate components?

Specific rules of separation

- » A contract may contain components that could/should be accounted for under another IFRS. Insurer should separate:
 - » embedded derivatives applying IFRS 9 guidance
 - » Investment components if the component is distinct
 - » Non insurance goods and services if distinct
- » After separation as above, insurer must apply IFRS 17 to all remaining components

IFRS 17.11 to 13, 17.B31 to B35

9

9

Examples Separating elements in contracts

Legal form versus substance. Consider:

Are elements inter-dependent?

- Theft, accident and fire cover of a vehicle are
- Pet insurance and vehicle insurance are generally not

Is duration/
Termination linked?

- Does cancellation, termination of one element trigger the same for others?
- Are the durations the same?

Are integral terms linked?

- Can additional elements be added (eg by way of riders)?
- Do terms change if element added or terminated?

10

10

Premium allocation approach

Criteria

11

11

Coverage period

- » *The period during which the entity provides coverage for insured events. This period includes the coverage that relate to all premiums within the boundary of the insurance contract.*
 - » Begins when coverage for unexpected event starts
 - » Ends when the entity has the practical ability to reassess risks and reset premiums
- » Note: a claims period may extend beyond the end of the coverage period (for example when policyholder has three months to claim after an event has occurred)

IFRS 17 definitions

13

13

Considerations

» A number of factors need to be considered:

Factor	Considerations
Contract terms	Do the specific contract terms allow the insurer to: <ul style="list-style-type: none"> • cancel, or • fully reprice the contract
Implied terms	Are there potential implied terms, for example: <ul style="list-style-type: none"> • Past practice • Legal or prudential requirements • Consumer protections
Intention	• Intention does not matter <u>unless</u> it has created a legitimate and actionable expectation for policyholder to enforce

14

14

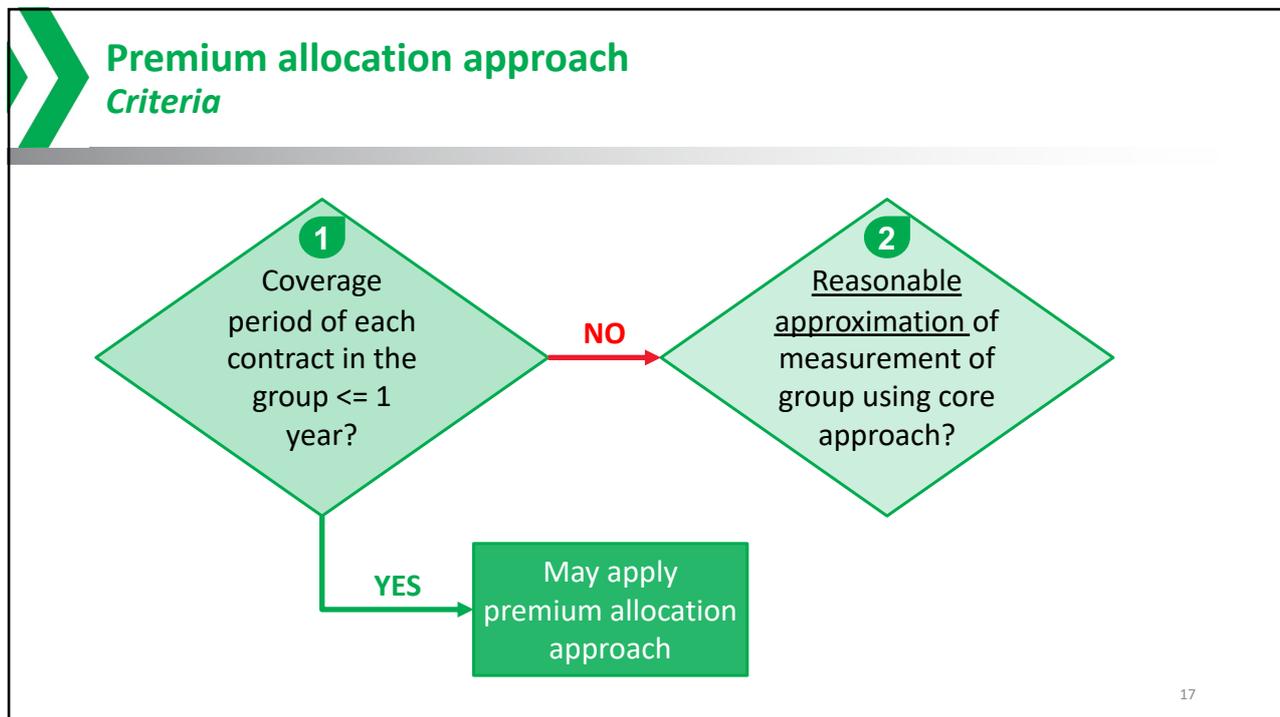

Example Contract Boundary

» Insurer issues four types of car insurance contracts:

	A contract that....	Automatically eligible (Y/N)
1	Can be cancelled by either party with 30 days notice, expected to continue for 2 years	
2	Signed for 1 year, automatic renewal, annual inflation increase, only policyholder can cancel	
3	Signed for 1 year, automatic renewal, annual increase decided by Addis, only policyholder can cancel	
4	Signed for one year, no automatic renewal	

12

15

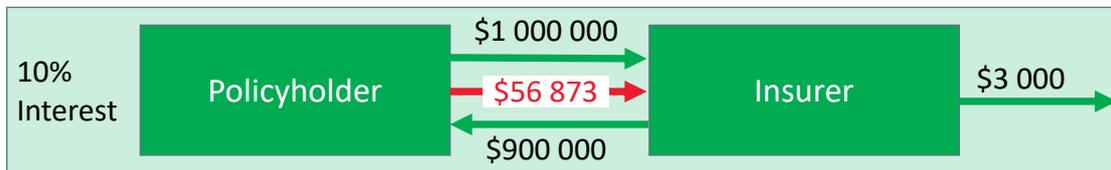

17

18

Example
One year vehicle contract

- » Insurer writes 100 car contracts and expects that:
 - » Interest rate is 10%
 - » It pays \$3 000 in car inspection costs on 1 January for all contracts
 - » Policyholders pay an annual premium of \$10 000 each on 2 January
 - » Total risk premium is \$5 000 per month, \$56 873 discounted
 - » Insurer expects claims of \$75 000 per month (\$900 000 in total)

19

19

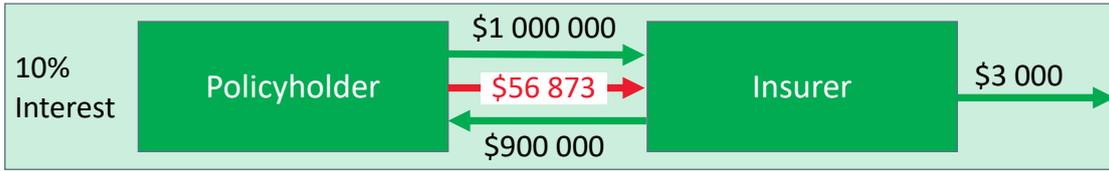

Example
One year vehicle contract – acquisition cost

Initial payment	PAA		Core	
	Debit	Credit	Debit	Credit
Acquisition cost asset	3 000		3 000	
Cash		3 000		3 000
Insurance liability	3 000		3 000	
Acquisition cost asset		3 000		3 000
Insurance liability	3 000		3 000	

20

Example
One year vehicle contract – initial recognition

	PAA		Core	
	Debit	Credit	Debit	Credit
Initial recognition				
Insurance liability (premiums)	-		1 000 000	
Insurance liability (claims)		-		853 088
Insurance liability (risk)		-		56 873
Insurance liability (CSM)		-		90 039
Insurance liability	3 000		3 000	

21

Example
One year vehicle contract – receipt of premium

	PAA		Core	
	Debit	Credit	Debit	Credit
Premium receipt				
Cash	1 000 000		1 000 000	
Insurance liability (premiums)		1 000 000		1 000 000

Insurance <u>initial</u> liability		997 000		997 000
-------------------------------------------	--	----------------	--	----------------

22

Example
One year vehicle contract – Interest and payment of claim

End month 1	PAA		Core	
	Debit	Credit	Debit	Credit
Interest expense	8 308		8 308	
Insurance liability		8 308		8 308
Claim expense	75 000		75 000	
Cash		75 000		75 000
Insurance liability		930 308		930 308

23

Example
One year vehicle contract – Profit recognition journals

End month 1	PAA		Core	
	Debit	Credit	Debit	Credit
Insurance liability (CSM)	87 652		7 652	
Insurance liability (Risk)			5 000	
Insurance liability (claims)			75 000	
Revenue		87 652		87 652
Insurance liability		842 656		842 656

Applying B126 with B125
Alternatively, applying B126

24

24

Example
One year vehicle contract – amortisation of acquisition cost

End month 1	PAA		Core	
	Debit	Credit	Debit	Credit
Acquisition cost expense	264		264	
Revenue		264		264

Applying B126 with B125
Alternatively, applying B126

25

25

Example
One year vehicle contract – Income statement end month 1

Income statement	PAA		Core	
	Debit	Credit	Debit	Credit
Revenue		87 916		87 916
Claims	75 000		75 000	
Acquisition expense	264		264	
Underwriting margin		12 652		12 652
Breakdown				
CSM				7 652
Risk margin				5 000
Underwriting margin				12 652

26

26

Example
One year vehicle contract – Income statement 1st 6 months

Income statement	PAA		Core	
	Debit	Credit	Debit	Credit
Revenue		527 495		527 495
Claims	450 000		450 000	
Acquisition expense	1 582		1 582	
Underwriting margin		75 913		75 913

Breakdown				
CSM				45 913
Risk margin				30 000
Underwriting margin				75 913

27

27

Reasonable approximation
Drivers of different outcomes

Event	PAA	Core
Change in <u>expected</u> future claims	No effect on PAA <u>if not onerous</u>	Change in liability components, and consequential change in immediate profitability

28

28

Example
One year vehicle contract – end half year

» Insurer changes its expectations at end of half year:

» Expects:

Month	Original	Revised
Month 7 – 11 (per month)	75 000	75 000
Month 12	75 000	100 000

» Present value effect of expected increase in claims is \$23 786

29

29

Example
One year vehicle contract – change in claims

End month 1	PAA		Core	
	Debit	Credit	Debit	Credit
Opening balance		510 908		510 908
Insurance liability (CSM)	-		23 786	
Insurance liability (Claims)		-		23 786
Insurance liability		510 908		510 908

30

30

Example
One year vehicle contract – Interest and payment of claim

End month 7	PAA		Core	
	Debit	Credit	Debit	Credit
Interest expense	4 258		4 258	
Insurance liability		4 258		4 258
Claim expense	75 000		75 000	
Cash		75 000		75 000
Insurance liability		440 166		440 166

31

31

Example
One year vehicle contract – Profit recognition journals

End month 7	PAA		Core	
	Debit	Credit	Debit	Credit
Insurance liability (CSM)	87 652		3 571	
Insurance liability (Risk)			5 000	
Insurance liability (claims)			75 000	
Revenue		87 652		83 571
Insurance liability		427 514		431 594

32

32

Reasonable approximation
Drivers of different outcomes

Event	PAA	Core
Change in <u>expected</u> future claims	No effect on PAA <u>if not onerous</u>	Change in liability components, and consequential change in immediate profitability
Change in interest rates	No change if not onerous	Change in liability, and consequential change in immediate profitability

33

33

Example
One year vehicle contract – end half year

» Interest rates change at end of half year from 10% to 5%. No change in expected cash flows:

Month	Original	Revised
Month 7 – 12 (per month)	75 000	75 000
Present value of cash outflows	437 161	443 510

» Change in present value due to interest rate is \$6 348

34

34

Example
One year vehicle contract – change in interest rate

End month 1	PAA		Core	
	Debit	Credit	Debit	Credit
Opening balance		510 908		510 908
Interest rate change expense	-		6 348	
Insurance liability (Claims)		-		6 348
Insurance liability		510 908		517 257

35

35

Example
One year vehicle contract – Interest and payment of claim

End month 7	PAA		Core	
	Debit	Credit	Debit	Credit
Interest expense	4 258		2 463	
Insurance liability		4 258		2 463
Claim expense	75 000		75 000	
Cash		75 000		75 000
Insurance liability		440 166		444 719

36

36

Example
One year vehicle contract – Profit recognition journals

End month 7	PAA		Core	
	Debit	Credit	Debit	Credit
Insurance liability (CSM)	87 652		7 652	
Insurance liability (Risk)			5 000	
Insurance liability (claims)			75 000	
Revenue		87 652		87 652
Insurance liability		427 514		432 067

37

37

Reasonable approximation
Drivers of different outcomes

Event	PAA	Core
Change in <u>expected</u> future claims	No effect on PAA <u>if not onerous</u>	Change in liability components, and consequential change in immediate profitability
Change in interest rates	No change if not onerous	Change in liability, and consequential change in immediate profitability
Uneven earnings pattern	Less sensitive	More sensitive, especially risk release

38

38

Reasonable approximation
Level of assessment

- » Eligibility is **assessed at group level** (ie offsetting and averaging)
- » **Judgement** will be needed:
 - » Determine **reasonable expected future** scenarios
 - » Identify the **range of relevant scenarios** from the specific features and circumstances of the group
 - » Future scenarios should reflect the **variability in the FCF** the entity expects
- » Generally applied using ‘shock’ scenarios the comparing PAA model to core model

39

39

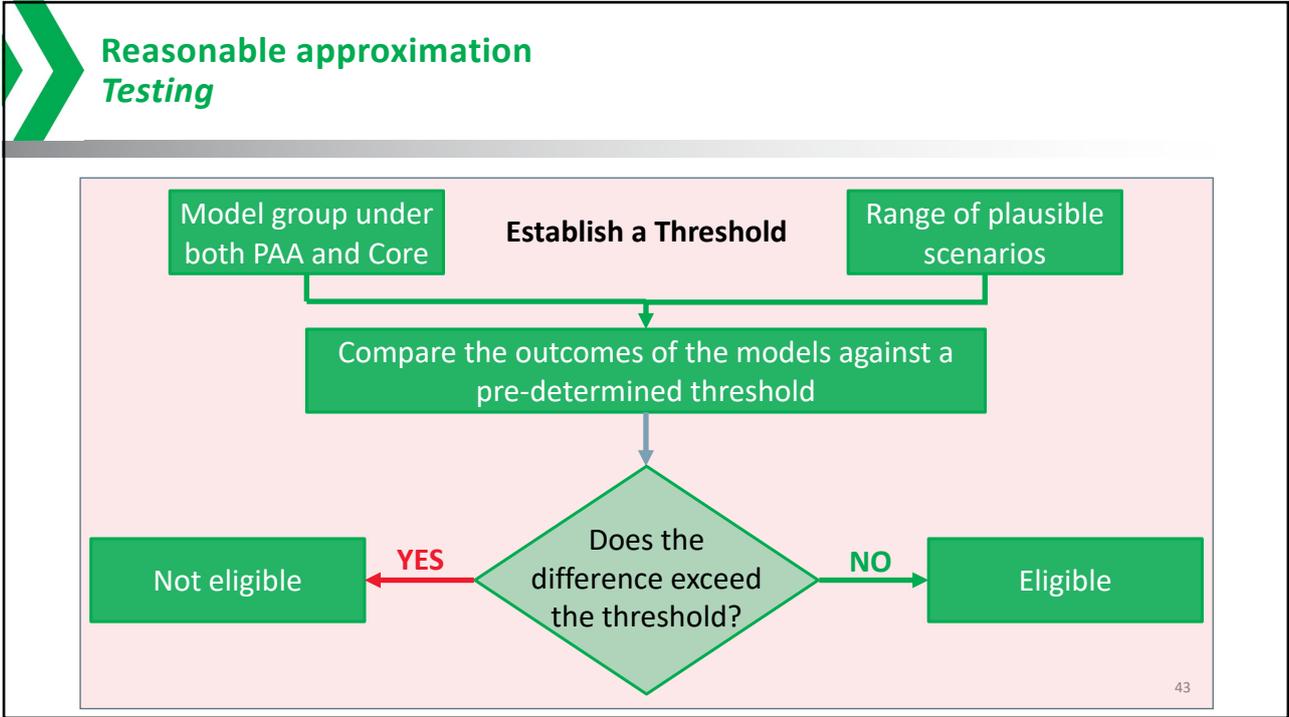

Reasonable approximation
Susceptibility

» The differentiators are very sensitive to:

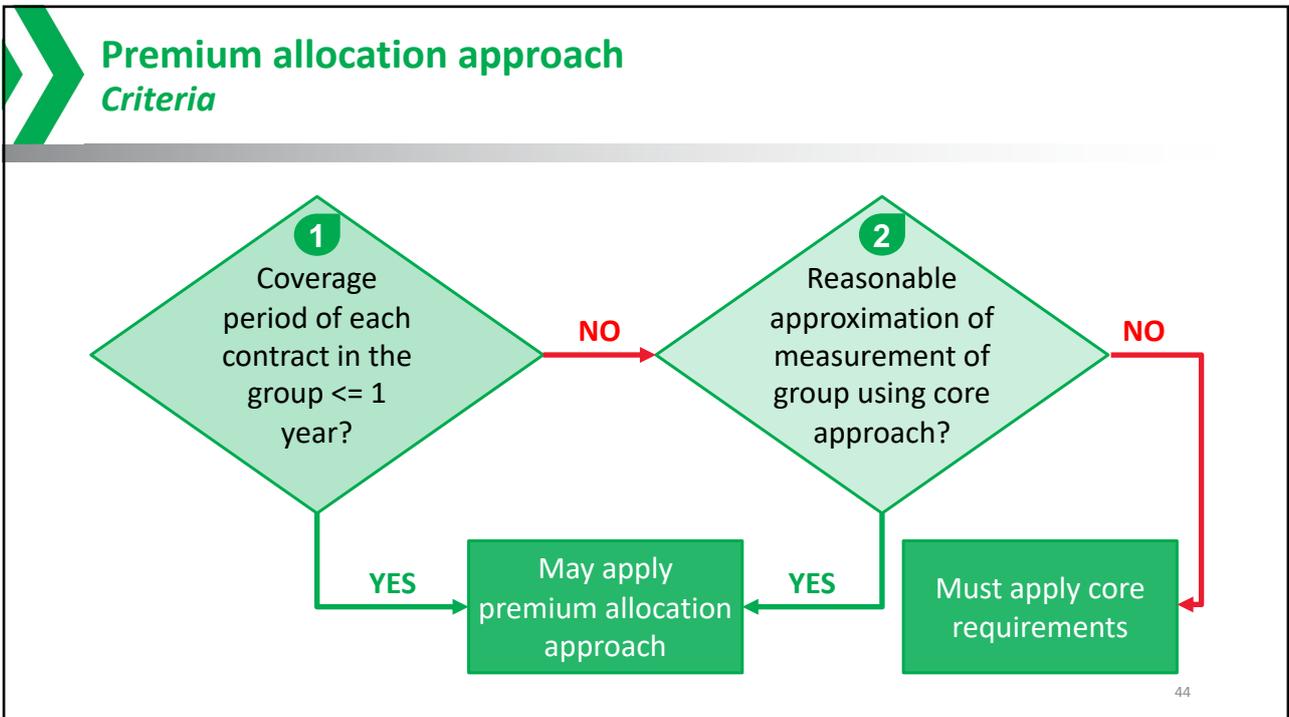

Factor	Susceptibility
Duration of coverage period	<ul style="list-style-type: none"> • Changes in interest rates • Unexpected average claims experience • Changes in assumptions
Complexity	<ul style="list-style-type: none"> • Unexpected average claims experience • Changes in external factors (eg forex rates) • Changes in assumptions
Variability of risk	<ul style="list-style-type: none"> • Unexpected average claims experience • Changes in assumptions

42

42

43

44

Recognition

- » Insurance contracts are recognised from the earliest of:
 - » beginning of coverage period of first contract in group
 - » date when first payment from a policyholder becomes due, or
 - » for onerous contracts, when the group becomes onerous (facts and circumstances)
- » If no contractual due date, then date received
- » Acquisition cash flow asset or liability is recognised when incurred, and derecognised when the group of insurance contracts to which the cash flows are allocated is recognised

IFRS 17.25 to 28

45

45

Identifying onerous contracts At initial recognition

Identify portfolios
of contracts

- Based on internal management information, and
- Type of risk

Determine
whether subsets
are onerous

- **Facts and circumstances test**
- Pricing data:
 - Formalised process of documenting pricing methodology
 - Cataloguing and building audit trail, or
- Reserving data
 - Full reserving calculation
- Other (strategy, marketing etc)

46

46

Identifying onerous contracts

Subsequent

Determine whether groups are onerous

- **Facts and circumstances test**
- Other information (eg identification of pricing error, losses on completed contracts)
- Pricing data
 - Changes in more recent pricing
- Reserving data
 - Full reserving calculation

47

47

Premium allocation approach

Simplifications - initial measurement

Premiums (if any) received at initial recognition

CF

Cash premium received at initial recognition creates/increases liability

48

48

Initial recognition

Delayed premium

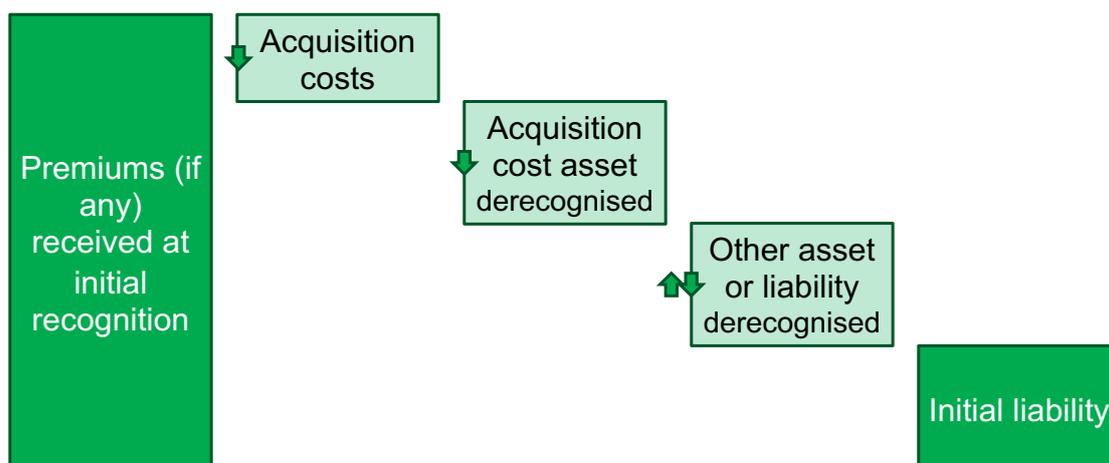

- » In some jurisdictions:
 - » First payment of premium can be delayed beyond commencement of coverage period
 - » If contract not onerous, recognition happens on commencement of coverage
 - » However, there are no cash flows
 - » Therefore contract (group) recognised at zero unless triggered by
 - » Acquisition costs
 - » Some other cost

49

49

Premium allocation approach

Simplifications - initial measurement

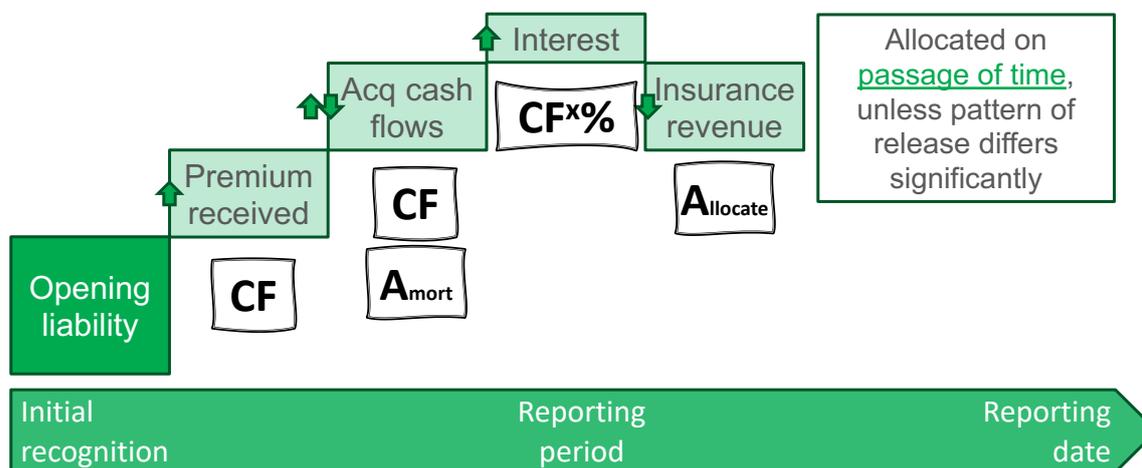

50

50

Premium allocation approach

Simplifications - subsequent measurement

51

51

Allocation of insurance revenue

'If expected pattern of release of risk differs significantly from passage of time, then recognise revenue on the basis of the expected timing of incurred insurance service expenses'

» Thus:

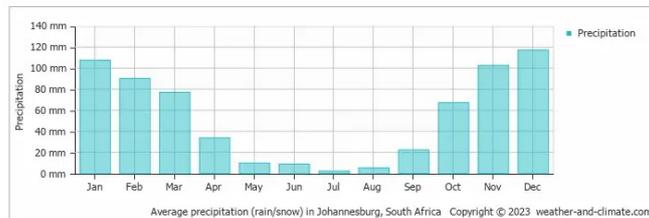

- » Pattern of release from risk is uneven, then
 - » Look at the expected expenses (biggest of which is likely to be claims)
 - » If pattern is uneven, then use that pattern

52

52

**Example
Pattern of release**

- » Insurer provides insurance for damage related to flooding
- » In a particular jurisdiction:
 - » Rainy season commences September, peaks December, ends April

- » Insurer has previously studied their claims data and noted that it tracks rainfall

53

53

**Example
Pattern of release**

- » Premium of \$100 000 received monthly commencing in January

	Jan	Feb	Mar	Apr	May	Jun
Premium received (\$'000)	100.0	100.0	100.0	100.0	100.0	100.0
Average rainfall (mm)	108	90	78	36	10	8
Allocated revenue (\$'000)	200.3	166.9	144.7	66.7	18.6	14.8

	Jul	Aug	Sep	Oct	Nov	Dec
Premium received (\$'000)	100.0	100.0	100.0	100.0	100.0	100.0
Average rainfall (mm)	2	4	22	68	102	119
Allocated revenue (\$'000)	3.7	7.4	40.8	126.1	189.2	220.7

54

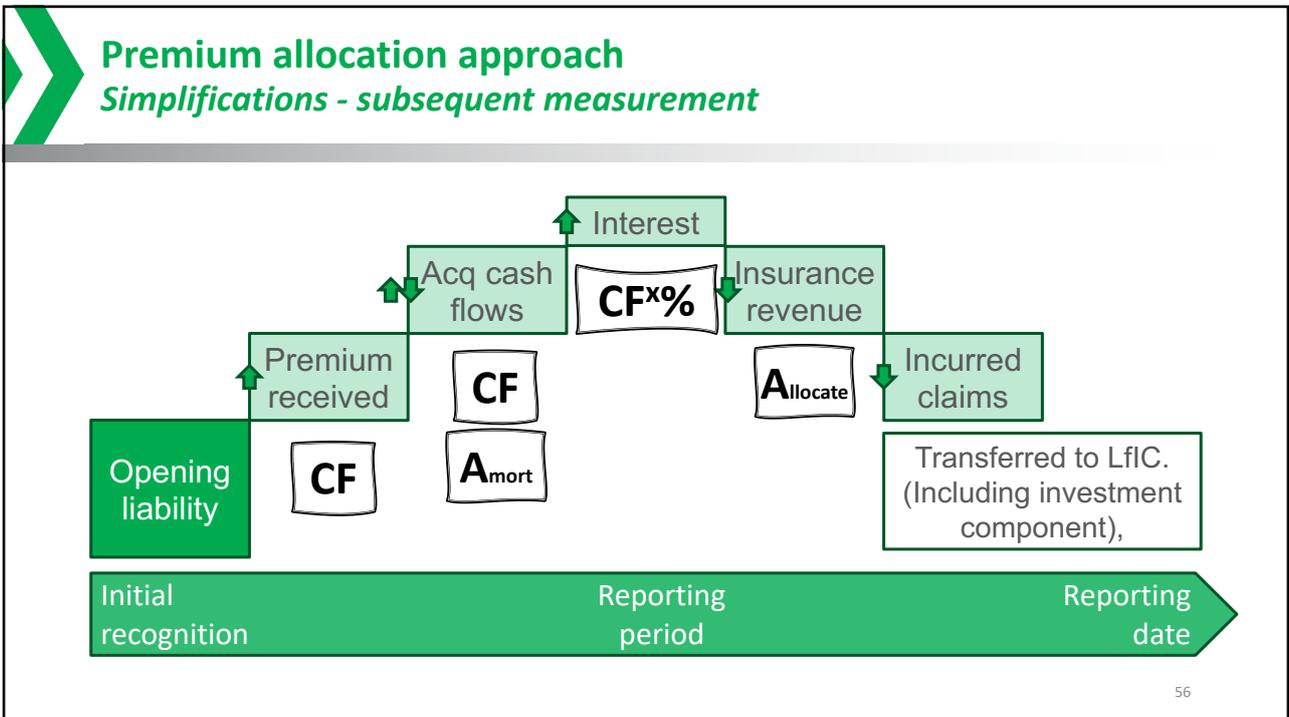

54

Example Of different patterns of release

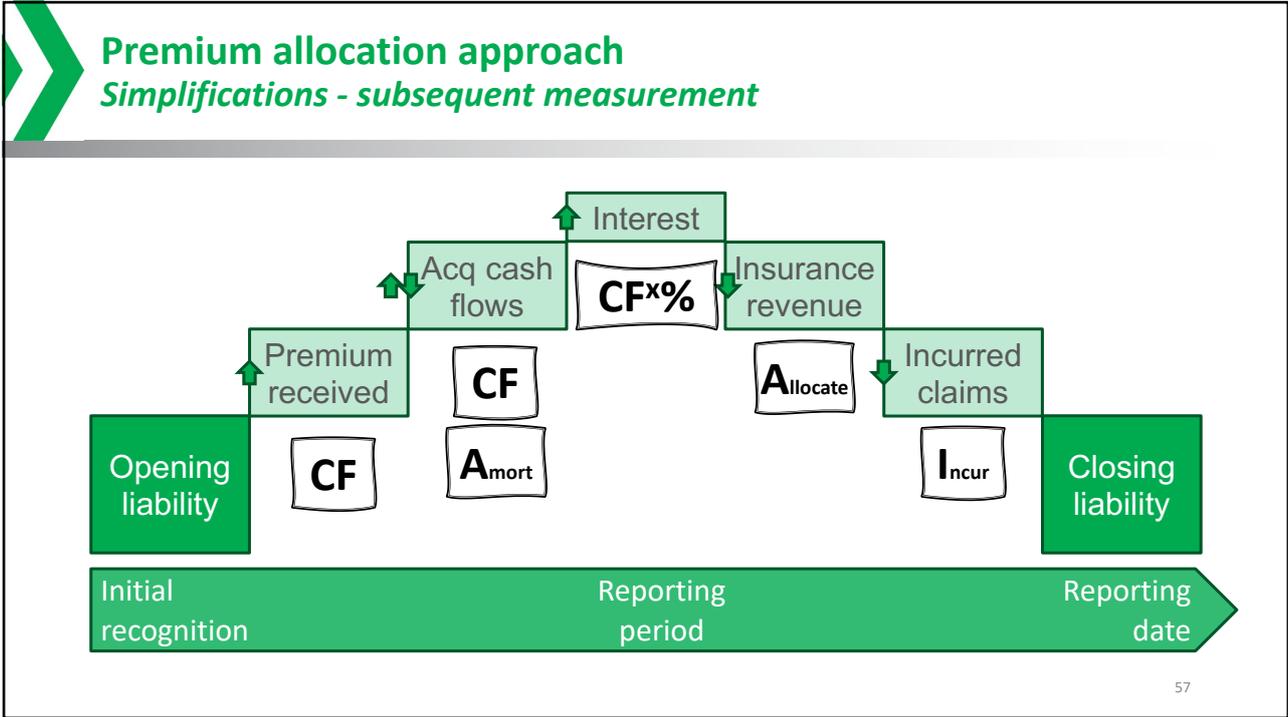

Types of contracts	Example
Vehicle contracts	If conditions causing accidents are seasonal: <ul style="list-style-type: none"> Snow, hail, rain More and less frequent use of vehicles
Personal accident	If personal accidents are driven by events: <ul style="list-style-type: none"> Sports injuries (such as skiing or water sports)
Fire insurance	If fires are seasonal: <ul style="list-style-type: none"> Wild fires in dry season, or Fires caused by electricity overload in winter
Travel insurance	<ul style="list-style-type: none"> If typically linked to popular holiday times

55

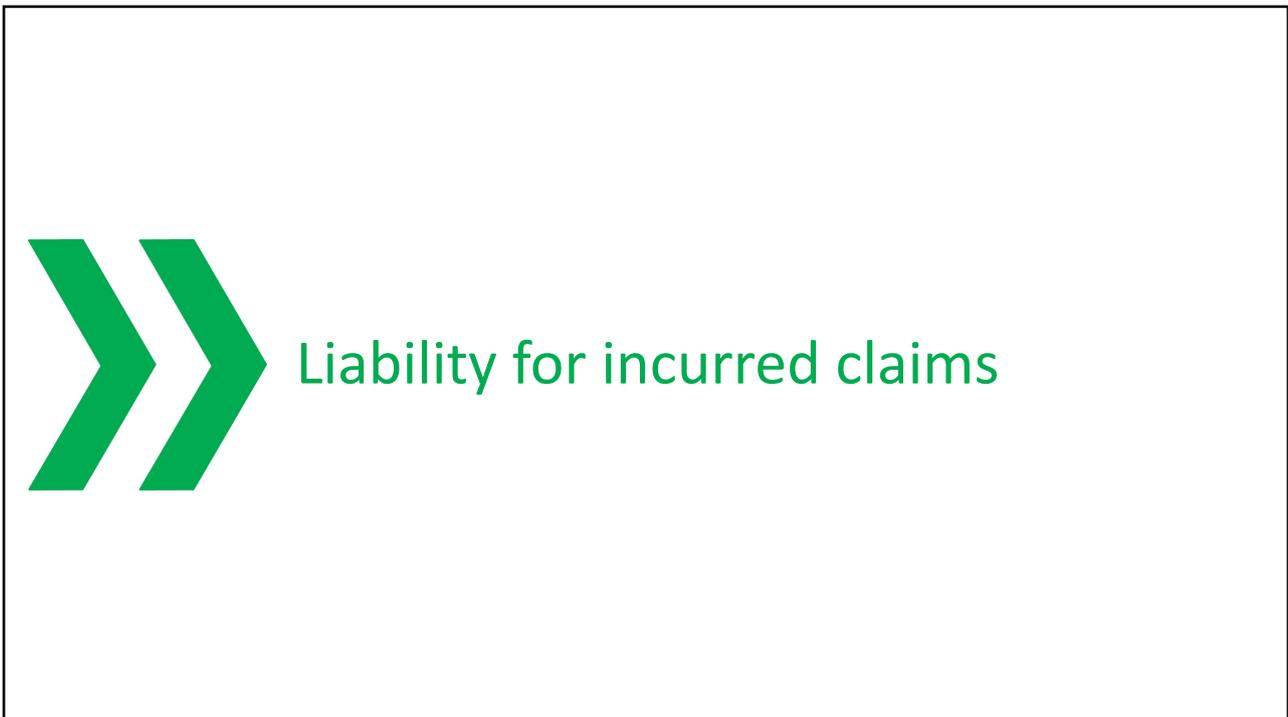

55

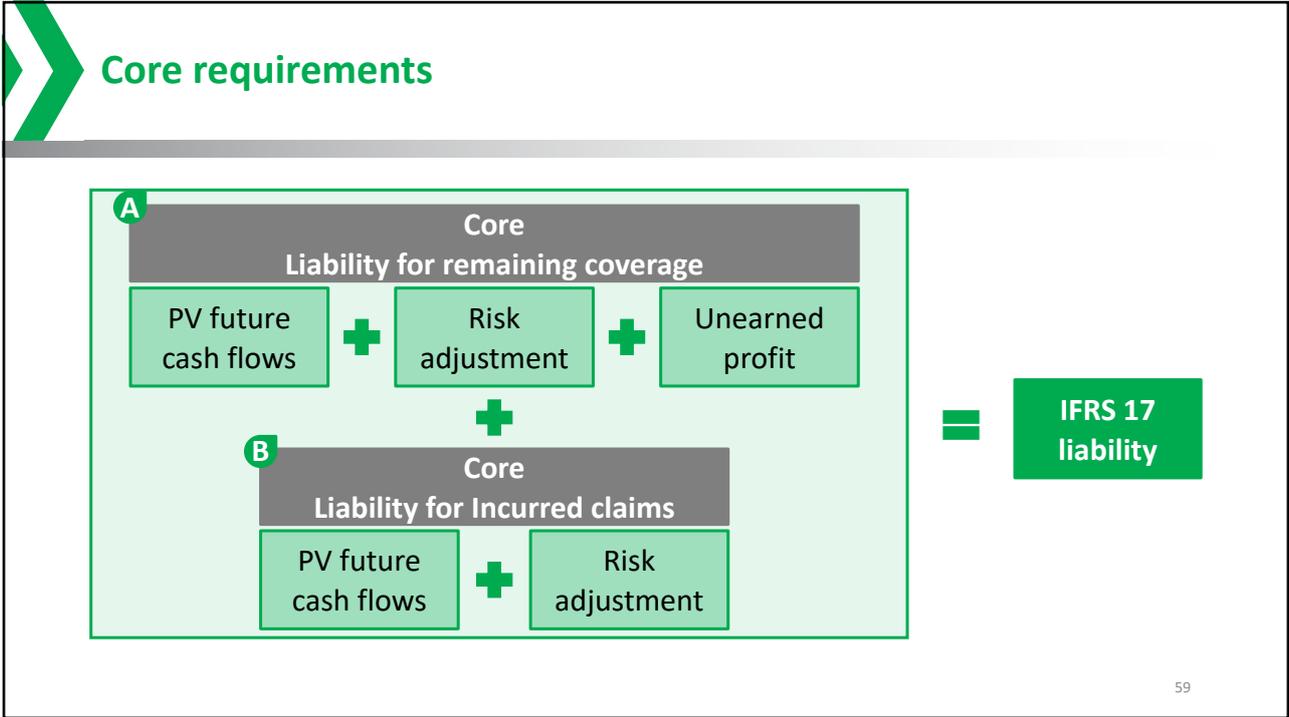

56

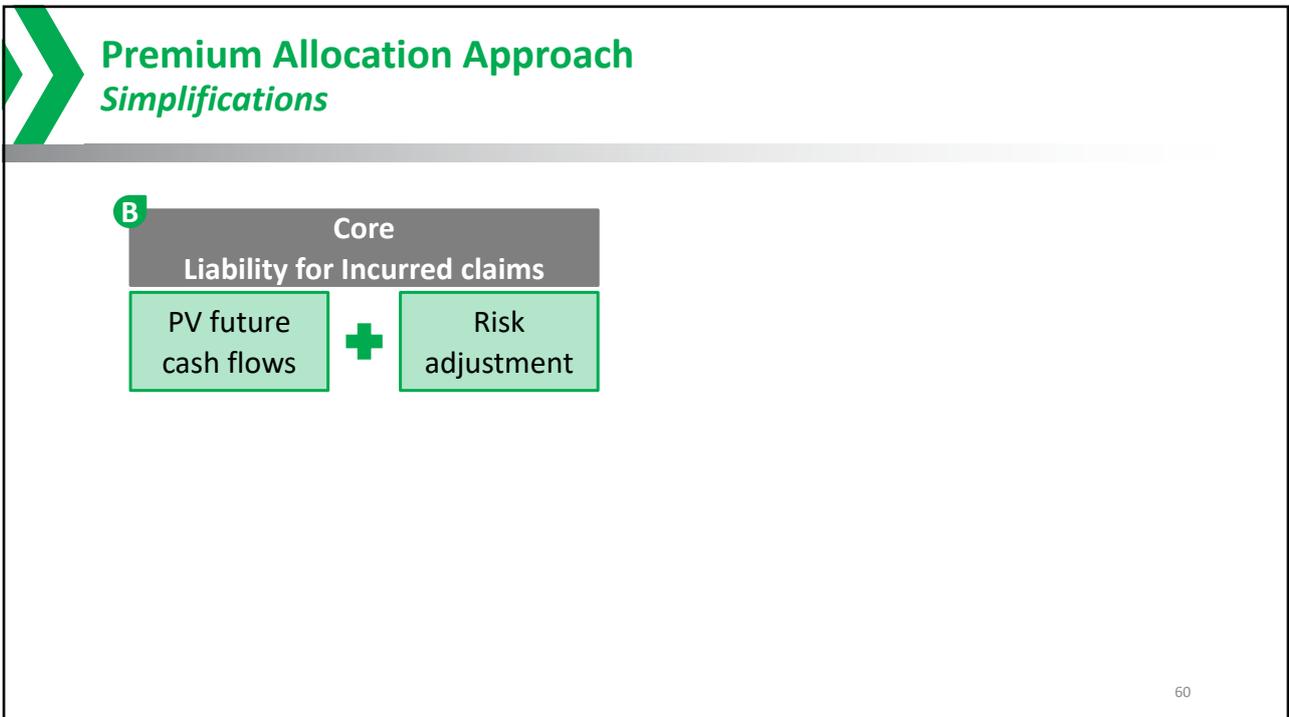

57

58

59

60

Fulfilment cash flows

Liability for incurred claims¹

- » *LfIC*: An entity's obligation to investigate and pay for:
 - » valid claims for insured events that **have already occurred**,
 - » Valid claims for insured events that have occurred but for which claims have not been reported,
 - » other incurred insurance expenses, and
 - » amounts related to services that have already been provided

61

61

Incurred by not reported

Mechanistic

- Based on historic average time between occurrence of event and reporting
- Multiplied by average daily claims
- Will differ between products (eg health care and car accident) and severity (big accidents and small accidents)

Judgemental

- Based on events (for example floods)
- Based on weighted analysis of recent history
- Based on market information (for example inflation)

Mixture

- Combination of above factors

62

62

1 Present value of future cash flows

Cash flows

» Current estimate of future expected claims cash flows

» Probability weighted and unbiased

63

63

1 Present value of future cash flows

Discount rates

Reflect time value of money and financial risks

- » Characteristics of the cash flows
- » Liquidity of the insurance contracts
- » To extent that financial risks are included in the cash flows

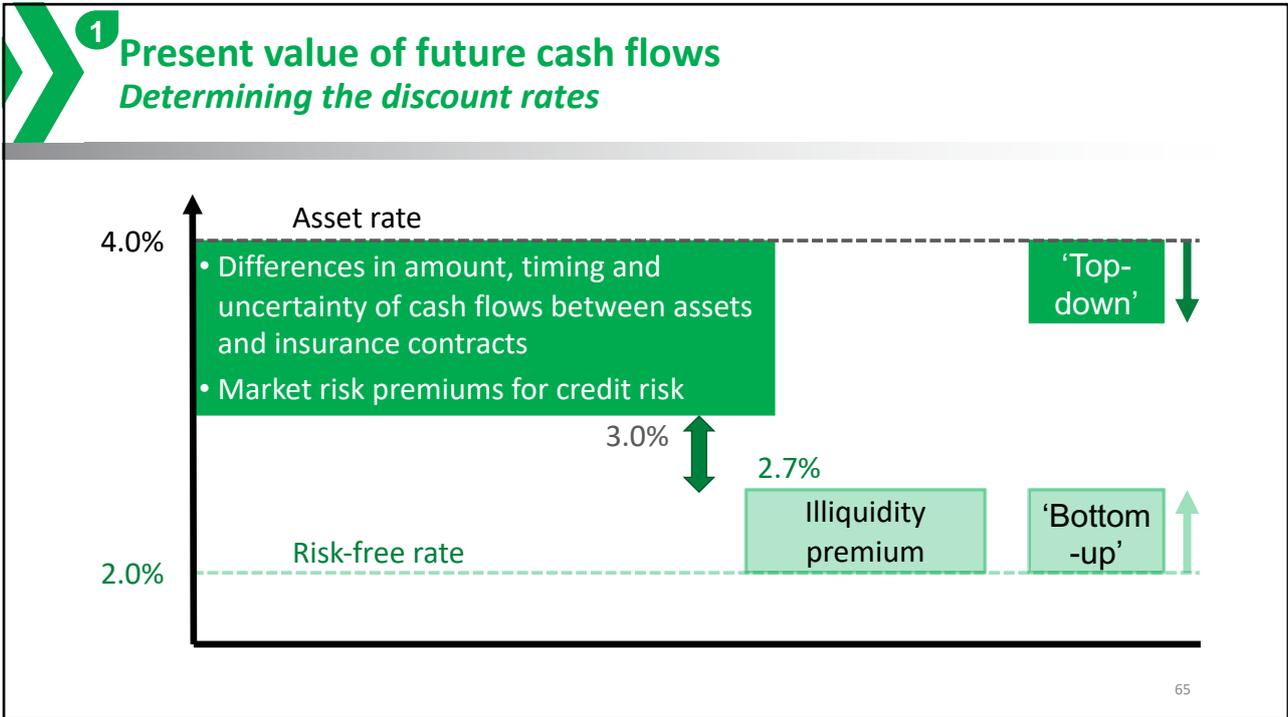

Consistent with observable market prices (if any)

Timing Currency Liquidity

Exclude the effect of factors in the observable market prices not relevant to insurance contracts eg credit risk

64

64

65

Present value of future cash flows

» The principle is relatively simple. For a contract with the following possible outcomes (10% discount rate):

	Scenario	Prob	Present value	PV x probability
1.	Pay claim of 5 000 in 6 months	5%	4 761	238
2.	Pay claim of 5 000 in 12 months	5%	4 545	227
3.	Pay no claim, pay rebate of 1 000	80%	909	727
4.	Pay no claim, pay no rebate	10%	0	0
Probability weighted cash outflow				1 193

» The challenge is the data and the number of scenarios
 » Eg assumptions of different sizes of claims, or lapse rates

66

2 Risk adjustment

- » Explicit, current adjustment for compensation insurer requires for bearing non-financial risk (eg insurance risk)
- » Compensation that makes a company indifferent between:
 - » fulfilling a liability that has a range of possible outcomes; and
 - » fulfilling a liability that will generate fixed cash flows

Group A	
Probability	Pay-off
50%	1 000 000
50%	0

Probability weighted average $(0.5 \times 1m) + (0.5 \times 0) = \text{CU}0.5m$

Group B	
Probability	Pay-off
100%	500 000

$1 \times 0.5m = \text{CU}0.5m$

67

67

Risk adjustment

May be linked to:

- » Internal pricing determination
- » Internal reserving requirements
- » External requirements such as prudential calculation

May be expressed as:

- » A percentage of premium
- » An absolute amount

May or may not be discounted

68

68

Premium Allocation Approach Simplifications

B

Core Liability for Incurred claims	
PV future cash flows	Risk adjustment

Simplifications	Optional practical expedient
<ul style="list-style-type: none"> » Consistent with core model, but » Optional practical expedient 	<ul style="list-style-type: none"> » Discount claims at current rate <u>unless</u> settlement expected in no more than 1 year

69

69

Premium Allocation Approach Simplifications

Premium allocation Liability for remaining coverage								
<ul style="list-style-type: none"> » No split required » <u>Cash flows based</u>, limited forecasting » Other practical expedients 								
Premium allocation Liability for incurred claims								
<ul style="list-style-type: none"> » Consistent with core » Practical expedient for discount rate 								

70

70

Onerous Contracts

71

Onerous contracts Recognition

- » *If at any time during the coverage period, facts and circumstances indicate that a group of insurance contracts is onerous, an entity shall calculate the difference between:*
 - » The carrying amount determined above and
 - » The fulfilment cash flows calculated applying the core model (ignoring discounting if that is what the entity has elected)
- » Determined:
 - » **Only if** facts and circumstances indicate (don't have to test otherwise)
 - » At a group level
 - » At initial inception or subsequently

IFRS17.57

72

72

Onerous contracts

Loss component

- » If a PAA contract is initially or subsequently onerous, entity recognises the expected loss in profit or loss immediately (*loss component*)
- » General requirements of IFRS 17 require establishing, tracking and running-off of a 'loss component'
 - » Loss component is 'amortised' over the life of the contract until it is zero (it must be zero at the end of the contract)
 - » The standard does not specify the pattern for the pattern of recognition.

73

73

Onerous contract example

Example

- » Addis issues a 2 year vehicle insurance contract:
 - » Premium in advance of \$24 000,
 - » Expected claims year 1 & year 2 \$12 500,
 - » For simplicity
 - » Interest is zero,
 - » risk margin is zero,

74

74

Onerous contract example
Example

» 2 year contract, premium \$24 000, expected claims yr 1 & 2 \$12 500, interest is zero, risk margin is zero, what is the expected loss?

	Cash flow	Present value
Cash inflow (premium)	24 000	
Immediate		24 000
Cash out flow (claims)	-25 000	
Interest rate is zero		-25 000
Risk margin (zero)		0
Expect loss		-1 000

75

75

Onerous contracts
Example

» 2 year contract,
 » Immediate premium of \$1 000,
 » Expected claims of \$550 in year 1 and \$550 year 2

76

76

Onerous contracts
Example

2 yr contract, premium \$1 000, expected claims yr 1 \$550 and yr 2 \$550

Balance sheet	Inception	Year 0	Year 1	Year 2	Ref
Insurance liability OB	-				
Premium received	-				
Revenue recognised	-				
Loss component	-100				17.58
Closing balance	-100				

77

77

Onerous contracts
Example

2 yr contract, premium \$1 000, expected claims yr 1 \$550 and yr 2 \$550

Balance sheet	Inception	Year 0	Year 1	Year 2	Ref
Insurance liability OB	-	-100			
Premium received	-	-1 000			17.55(a)
Revenue recognised	-	-			
Loss component	-100	-			17.58
Closing balance	-100	-1 100			
Revenue	-				
Claims	-				
Loss component	100				
Underwriting loss	100				

78

78

Onerous contracts
Example

2 yr contract, premium \$1 000, expected claims yr 1 \$550 and yr 2 \$550

Balance sheet	Inception	Year 0	Year 1	Year 2	Ref
Insurance liability OB	-	-100	-1 100		
Premium received	-	-1 000	-		17.55(a)
Revenue recognised	-	-	500		17.55(b)
Loss component	-100	-	50		17.58
Closing balance	-100	-1 100	-550		
Revenue	-				
Claims	-				
Loss component		100			
Underwriting loss		100			

79

79

Onerous contracts
Example

2 yr contract, premium \$1 000, expected claims yr 1 \$550 and yr 2 \$550

Balance sheet	Inception	Year 0	Year 1	Year 2	Ref
Insurance liability OB	-	-100	-1 100		
Premium received	-	-1 000	-		17.55(a)
Revenue recognised	-	-	500		17.55(b)
Loss component	-100	-	50		17.58
Closing balance	-100	-1 100	-550		
Revenue	-		-500		
Claims	-		550		
Loss component		100	-50		
Underwriting loss		100	-		

80

80

Onerous contracts
Example

2 yr contract, premium \$1 000, expected claims yr 1 \$550 and yr 2 \$550

Balance sheet	Inception	Year 0	Year 1	Year 2	Ref
Insurance liability OB	-	-100	-1 100	-600	
Premium received	-	-1 000	-	-	17.55(a)
Revenue recognised	-	-	500	500	17.55(b)
Loss component	-100	-	50	50	17.58
Closing balance	-100	-1 100	-550	-	
Revenue	-		-500		
Claims	-		550		
Loss component	100		-50		
Underwriting loss	100		-

84

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan
Opening balance	1 000 000
Interest	-
Revenue recognised	-

85

85

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan	31 Jan
Opening balance	1 000 000	1 000 000
Interest	-	8 333
Revenue recognised	-	-87 916

86

86

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan	31 Jan	28 Feb
Opening balance	1 000 000	1 000 000	920 417
Interest	-	8 333	7 670
Revenue recognised	-	-87 916	-87 916

87

87

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan	31 Jan	28 Feb	31 Mar
Opening balance	1 000 000	1 000 000	920 417	840 172
Interest	-	8 333	7 670	7 001
Revenue recognised	-	-87 916	-87 916	-87 916

88

88

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan	31 Jan	28 Feb	31 Mar	30 Apr
Opening balance	1 000 000	1 000 000	920 417	840 172	759 257
Interest	-	8 333	7 670	7 001	6 327
Revenue recognised	-	-87 916	-87 916	-87 916	-87 916

89

89

Example Paragraph B126 method

Calculate revenue directly:

	1 Jan	31 Jan	28 Feb	31 Mar	30 Apr
Opening balance	1 000 000	1 000 000	920 417	840 172	759 257
Interest	-	8 333	7 670	7 001	6 327
Revenue recognised	-	-87 916	-87 916	-87 916	-87 916
	31 Aug	30 Sep	31 Oct	30 Nov	31 Dec
Opening balance	428 800	344 458	259 412	173 658	87 189
Interest	3 573	2 870	2 162	1 447	727
Revenue recognised	-87 916	-87 916	-87 916	-87 916	-87 916

90

90

Example Alternatively method of calculating

- » B126 method:
 - » $\text{Pmt}=(\text{rate},\text{nper},\text{pv})$
 - » $\text{Pmt}=(10\%/12,12,1000000)$
 - » =87 916
 - » Method assumes that acquisition costs are allocated evenly

91

91

Example Alternatively method of calculating

- » B126 method:
 - » $\text{Pmt}=(\text{rate},\text{nper},\text{pv})$
 - » $\text{Pmt}=(10\%/12,12,1000000)$
 - » =87 916
 - » Method assumes that acquisition costs are allocated evenly
- » B125 and B126 together method
 - » $\text{Pmt}=(10\%/12,12,997000)$
 - » Method allows acquisition costs to be allocated on a different pattern

92

92

Example Alternatively method of calculating

- » B126 method:
 - » $\text{Pmt}=(\text{rate}, \text{nper}, \text{pv})$
 - » $\text{Pmt}=(10\%/12, 12, 1000000)=87\ 916$
 - » Method assumes that acquisition costs are allocated evenly
- » B125 and B126 together method
 - » $\text{Pmt}=(10\%/12, 12, 997000)=87\ 652$
 - » Method allows acquisition costs to be allocated on a different pattern

Both methods are correct
