Ukraine: Macroeconomic and Policy Outlook

October 2019

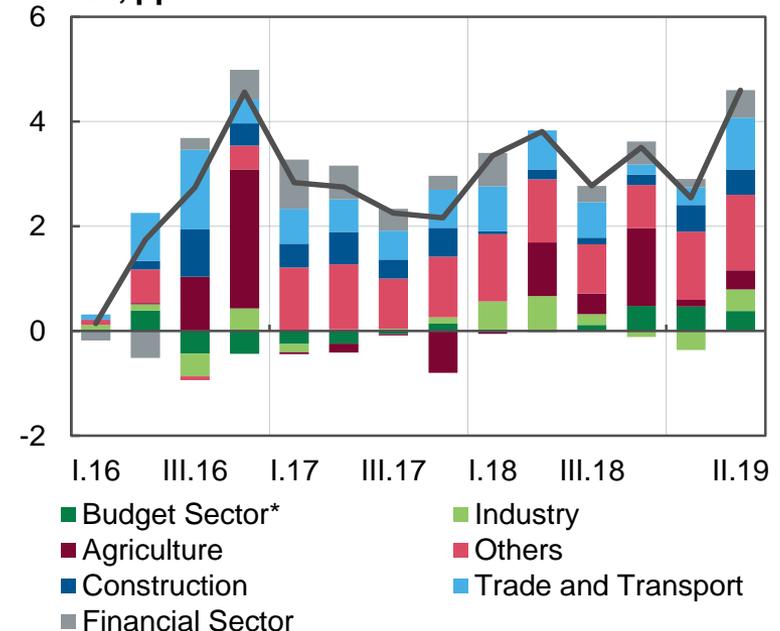

The Ukrainian economy has been recovering at a solid pace

Contributions to real GDP growth by final use, pp

Source: SSSU; NBU estimates and forecast (July 2019 IR).

Contributions to annual real GDP growth by sectors, pp

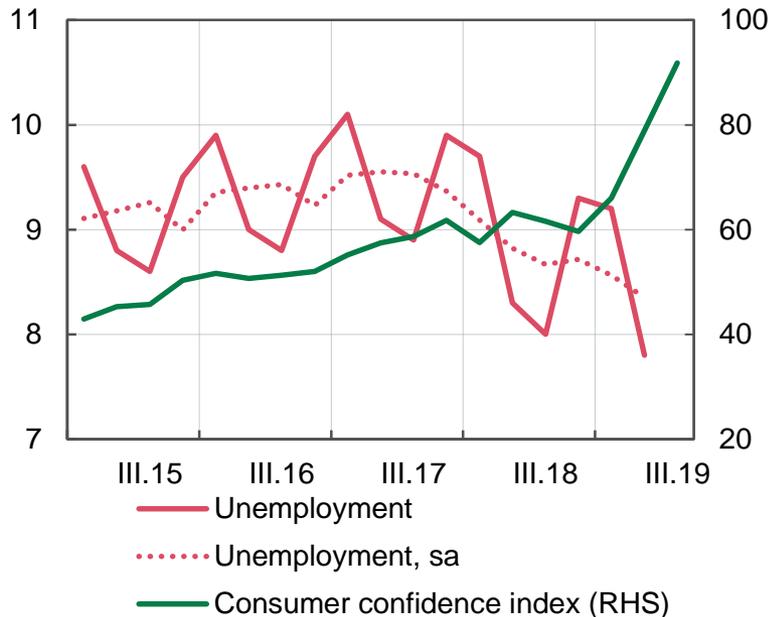

*Covers public administration and defense; education; healthcare; administrative and support service; professional, scientific and technical activities; arts and entertainment.

- In H1 2019, real GDP accelerated to an estimated 3.6% yoy, driven by strong domestic demand and favorable terms of trade
- By sectors, the growth is supported by expected another record high harvest of grains, improving performance in domestic trade and financial services
- In the forthcoming years, the growth will pick up as political uncertainty abates and monetary policy eases

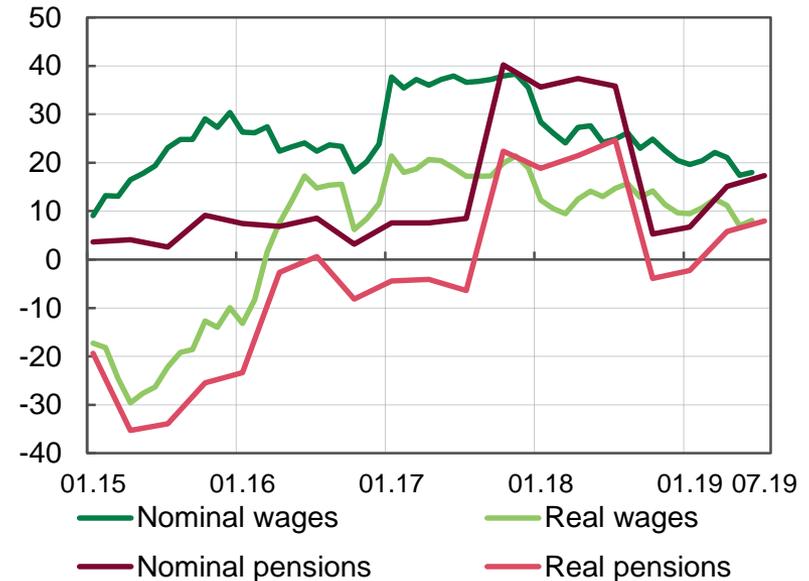

Acceleration in private consumption was supported by robust wage growth, improving employment and consumer sentiments

ILO Unemployment rate* and Consumer Confidence Index

* Unemployment – as a % labor force aged 15-70
Source: SSSU, InfoSapiens, NBU staff estimates.

Wages and Pensions (start of the month), % yoy

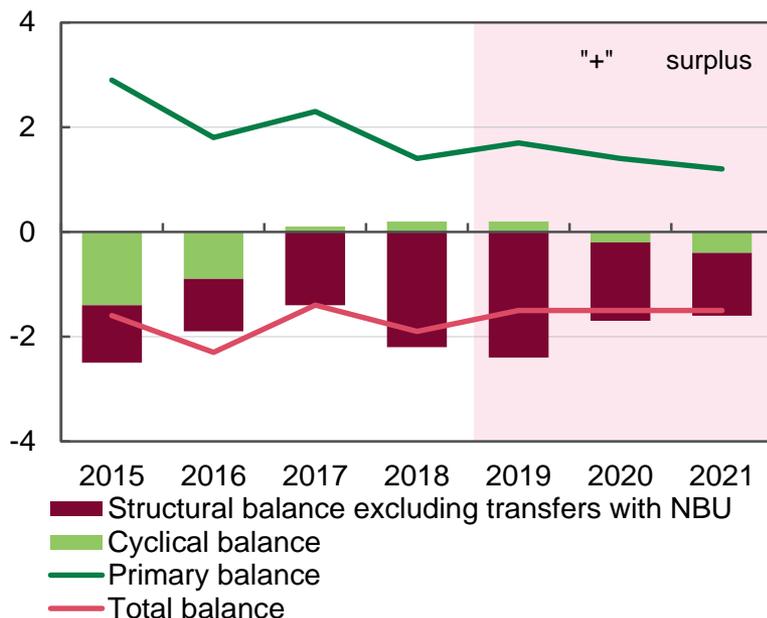

Source: SSSU, PFU, NBU staff estimates.

- Expanding economy underpinned solid labor demand, helping reduce unemployment rate
- Coupled with still persistent labor market mismatches, this caused wages to grow faster than expected. In addition, the growth in pensions picked up, reflecting planned adjustment of wage base in the pension benefit formula and a rise in benefits and one-off payments for selected groups
- Consumer sentiments are at many years' peak

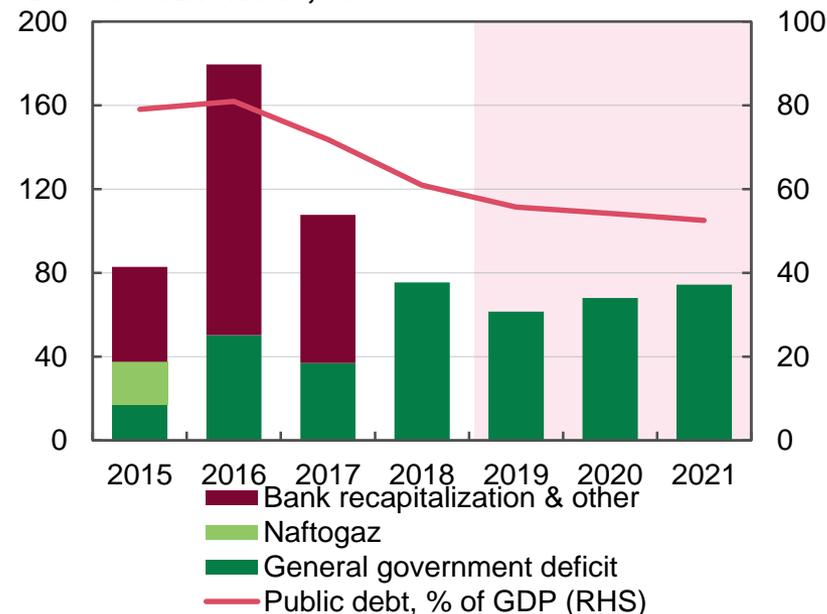

Fiscal policy has largely been in check over the last four years. In 2019-2021 fiscal policy is expected to be restrained

Consolidated Budget Balance, % of GDP

Public Sector Deficit, UAH bn, and Public Debt-to GDP Ratio, %

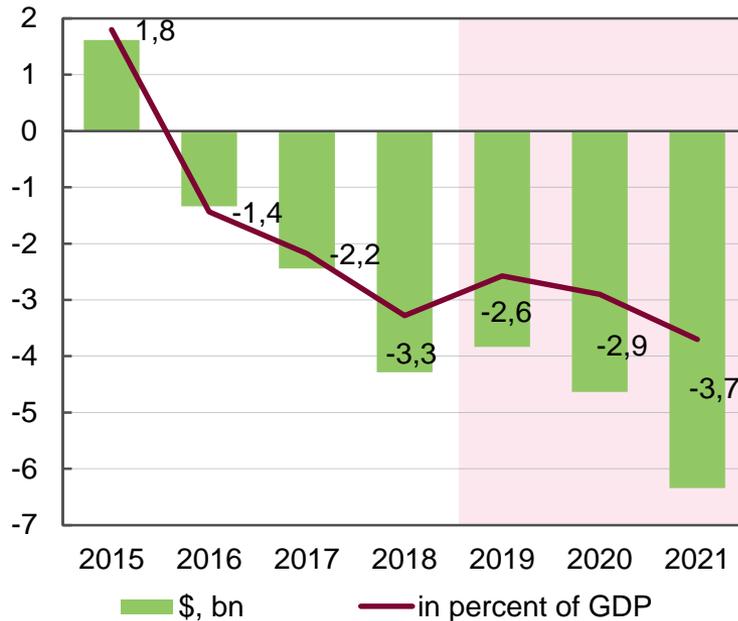

Source: MFU, SSSU, NBU calculations and forecast (Inflation Report July 2019).

- The consolidated fiscal deficit is forecast to remain at about 1.5% of GDP in 2019-2021 primarily because of large public debt financing needs amid peaks in external debt repayments
- The public debt-to-GDP ratio fell below 60% threshold in Q1 2019 and is forecast to slide further, falling below 60% threshold

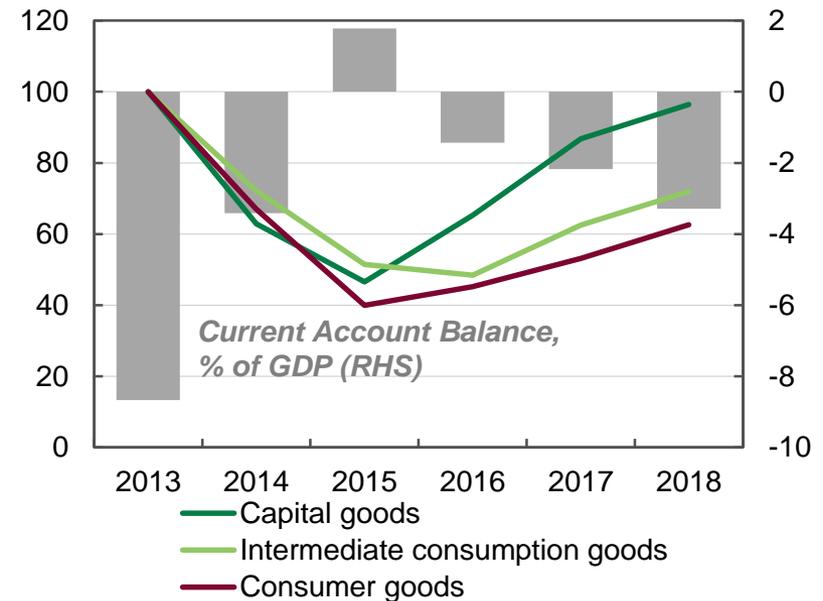

In 2019-2021 the CA deficit will remain at the sustainable level (3%±1 pp)

Current Account Balance

Source: NBU, Inflation Report July 2019.

CA Balance and Imports by BEC, 2013=100

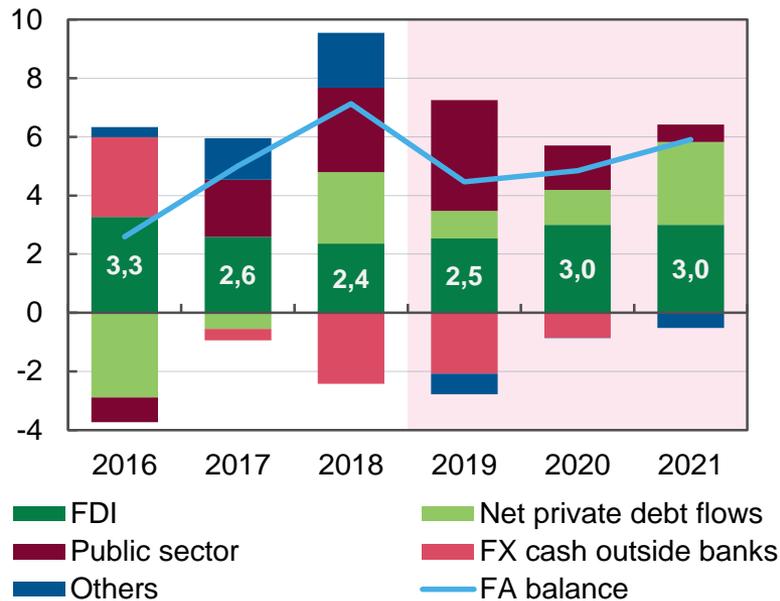

Source: NBU.

- After the 2014-2015 crisis, investment demand was the initial driver for the recovery in imports
- In 2019, the CA deficit will narrow to 2.6% GDP due to better ToTs, record high grain harvest and lower dividends repayments
- In 2020-2021, the CA deficit will widen due to a decrease in pipeline transportation, worsening ToTs, and increased consumer and investment imports. Meanwhile, it will remain at sustainable level

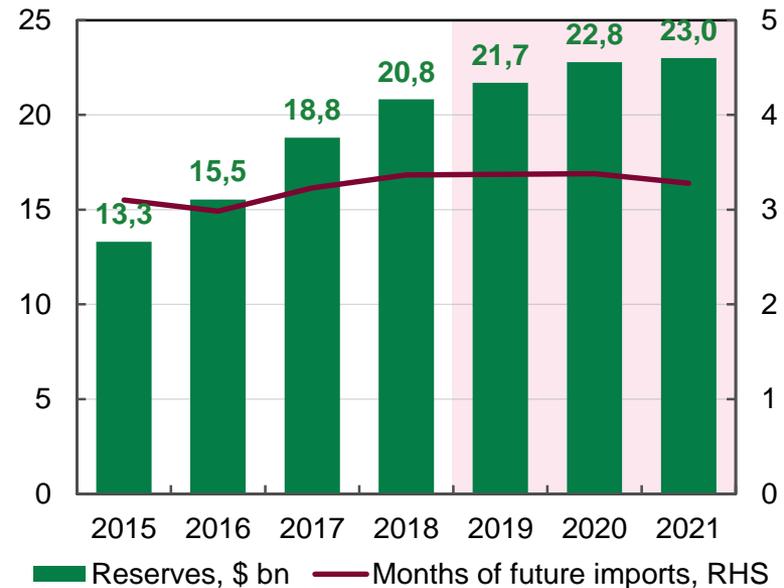

Capital inflows will continue into both public and private sectors in 2019-2021

Financial Account (FA): Net Inflows, USD bn

Source: NBU, Inflation Report July 2019.

Gross International Reserves, USD bn

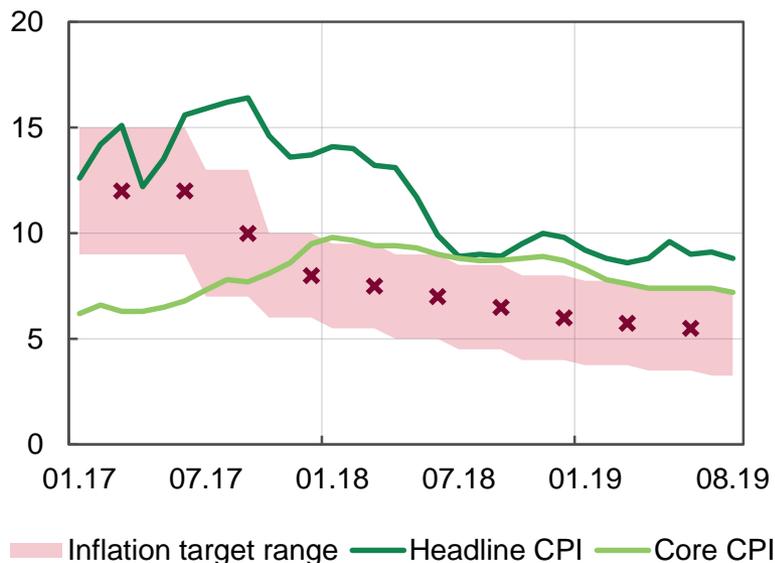

Source: NBU, Inflation Report July 2019.

- Capital inflows under the financial account will cover the CA deficit due to favorable interest rate on the background of easing monetary policy by main central banks and the beginning of the new program with IMF
- International Reserves will reach USD 23 bn at the end of 2021 due to net inflows from the new IMF program

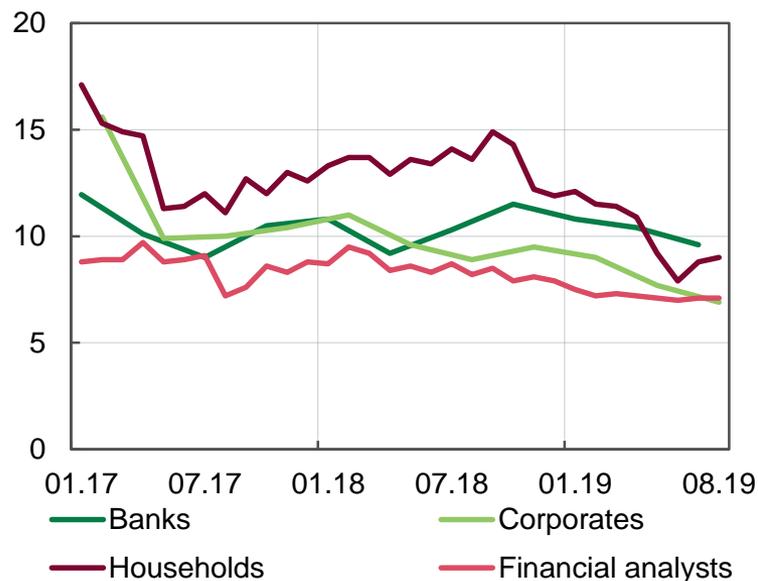

Headline inflation decelerates as monetary policy remains tight

Headline and Core Inflation, % yoy

Source: SSSU, NBU.

Inflation Expectations for the Next 12 Months, %

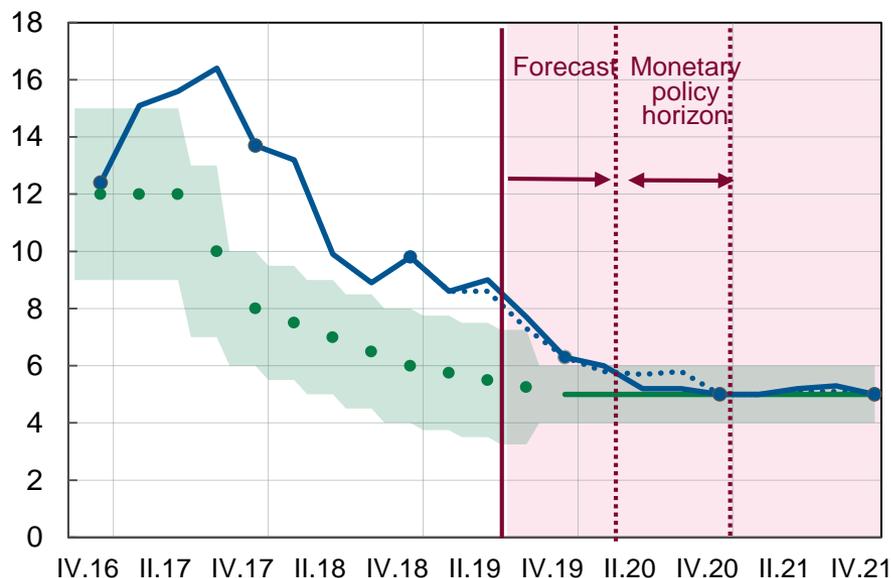

Source: NBU, GfK Ukraine surveys.

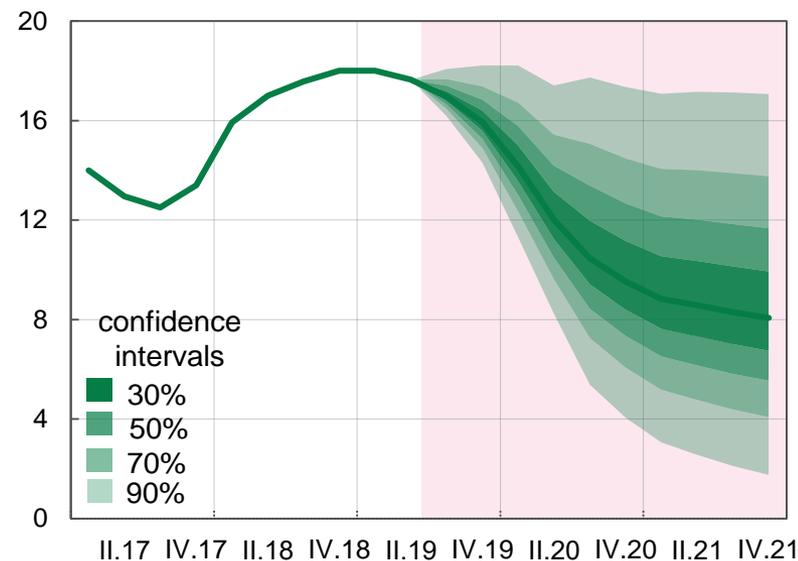

- Inflation decelerated to 8.8% yoy in August. A tight monetary policy was a strong factor holding back the underlying pressures on prices, in particular through the exchange rate channel
- Stronger Hryvnia also contributed to improving inflation expectations

Monetary policy is committed to bring inflation to 5% target in 2020 via monetary conditions consistent with disinflation

Headline CPI, % yoy

High real interest rates and simplifying access to government securities contributed to a further inflow of portfolio investments

Non-resident transactions with hryvnia government bonds and their scheduled redemptions*, UAH bn

* As of 20 September 2019.
Source: NBU staff estimates.

Hryvnia REER and NEER indices, monthly average, 12.2011=1

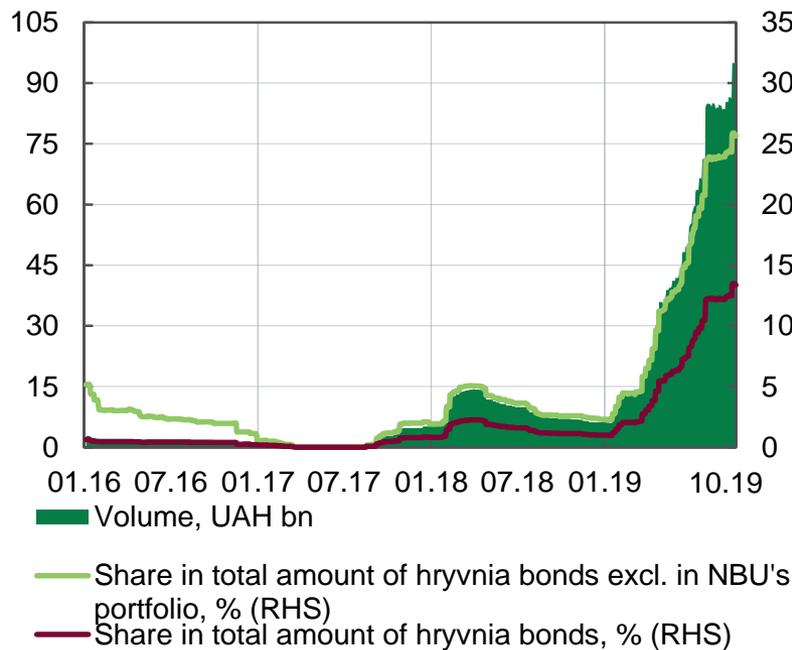

Source: NBU's estimates.

- Foreign investments in hryvnia domestic bonds increased by almost USD 4.0 bn since the beginning of 2019, and their term structure has widened up to 6 years
- Non-residents' interest in hryvnia bonds amid favorable FX conditions contributed to appreciation of NEER/REER in 2019, while most currencies of Ukraine's trade partners depreciated against USD
- As a result, NEER/REER remained stronger than last year (by 11.4% and 17.2% respectively in August 2019) and the NBU forecast

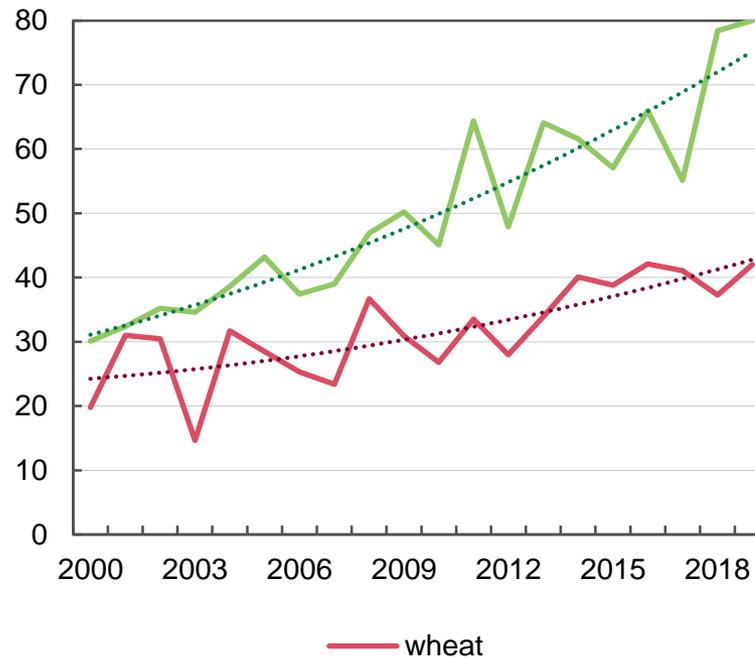

UAH appreciation is driven by strong portfolio inflows and boosting agricultural output

Capital inflows into government bonds: possible policy options

| Pros | Cons |
|---|--|
| Increase purchases of FX and prevent further UAH appreciation | |
| <ul style="list-style-type: none">• increase reserves buffer | <ul style="list-style-type: none">• inconsistent with IT: one-sided ER fluctuations (allowing only devaluation) will harm credibility and de-anchor expectations• could stimulate even more capital and attack on peg• inflationary pressure |
| Emergency key rate cut despite concerns over inflation | |
| <ul style="list-style-type: none">• could prevent further inflows and reduce costs for MinFin | <ul style="list-style-type: none">• inconsistent with IT and undermines NBU`s credibility• might provoke outflows |
| Capital controls | |
| ? not applicable as capital flows into government debt | |

Capital inflows into government bonds: policy reaction consistent with proclaimed strategy

NBU Monetary policy strategy

“ ...the NBU shall consider achievement and maintenance of price stability in the country to be its priority...

...

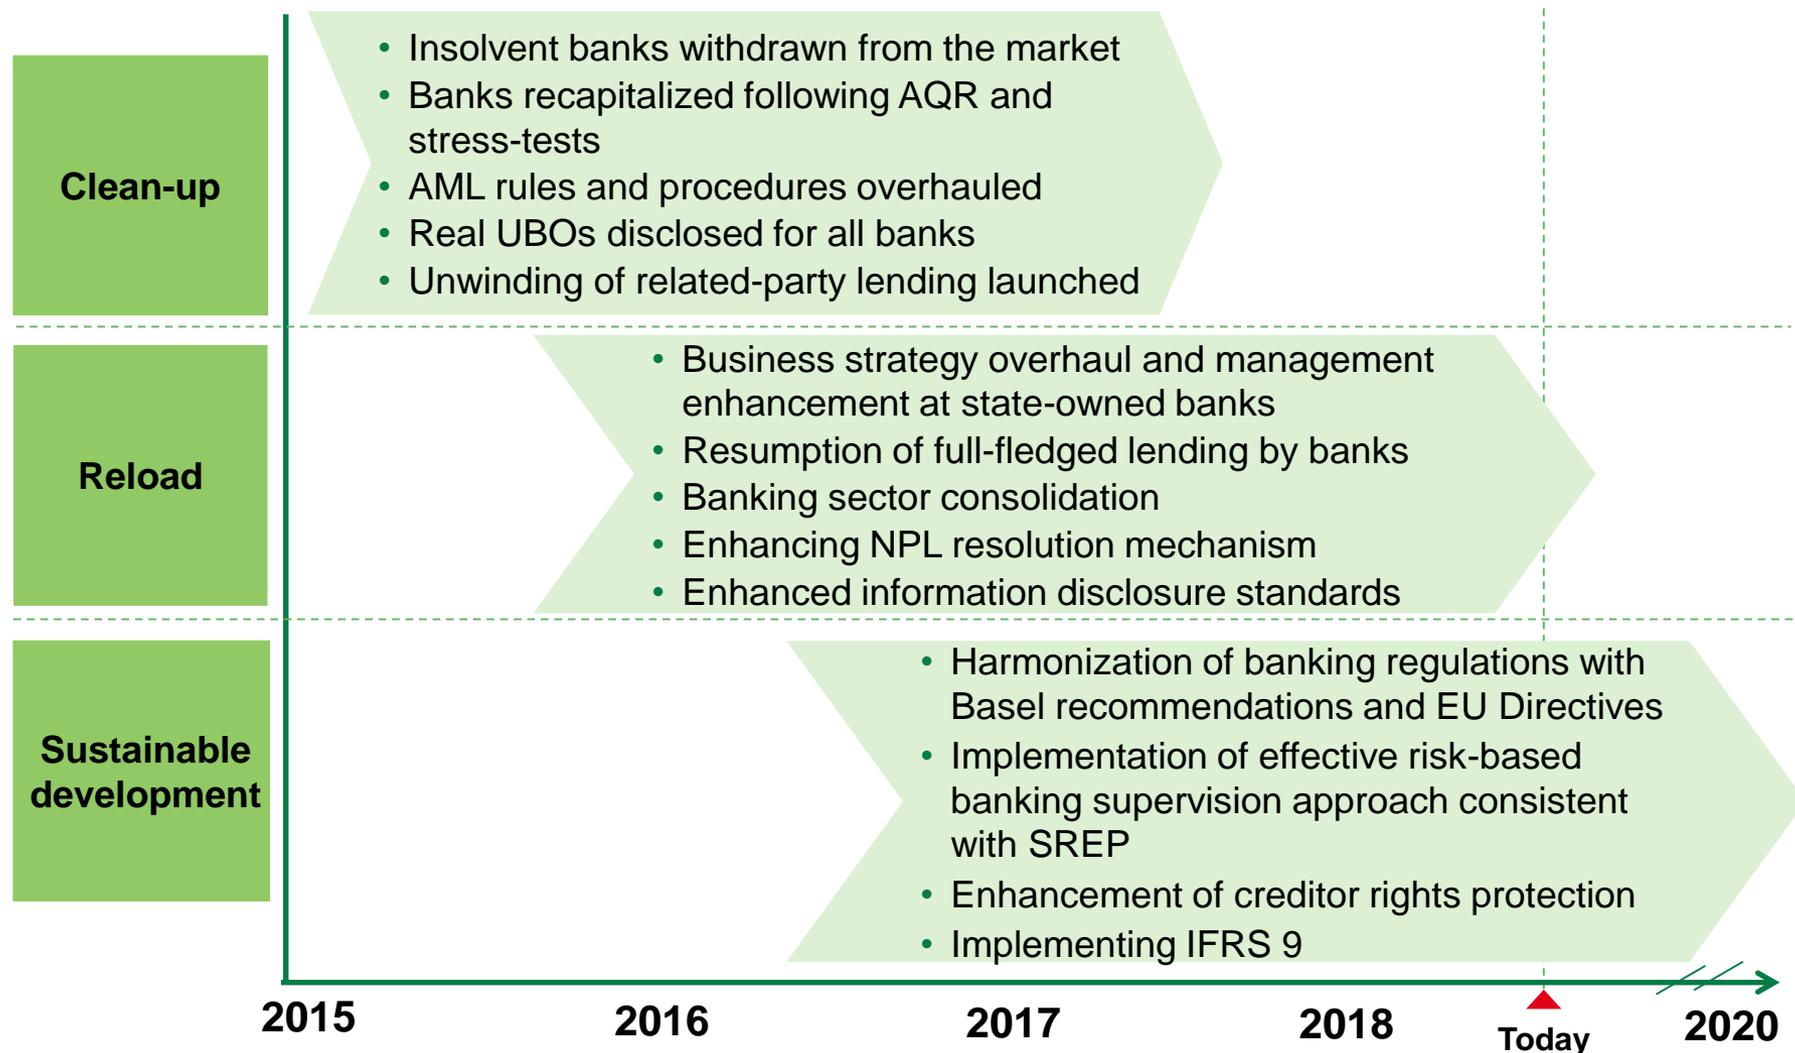

The NBU will remain committed to the floating exchange rate regime, meaning that it will not use monetary policy to achieve a certain level or the band of exchange rate.”

In current circumstances that mean ➡ continue balanced mix of UAH appreciation and FX accumulation

Results: enhanced credibility to inflation target

- ✓ de-anchoring inflation expectations and exchange rate
- ✓ de-dollarization
- ✓ extension of debt maturities and lower yields
- ✓ increase of salaries in USD terms – tamed labor migration

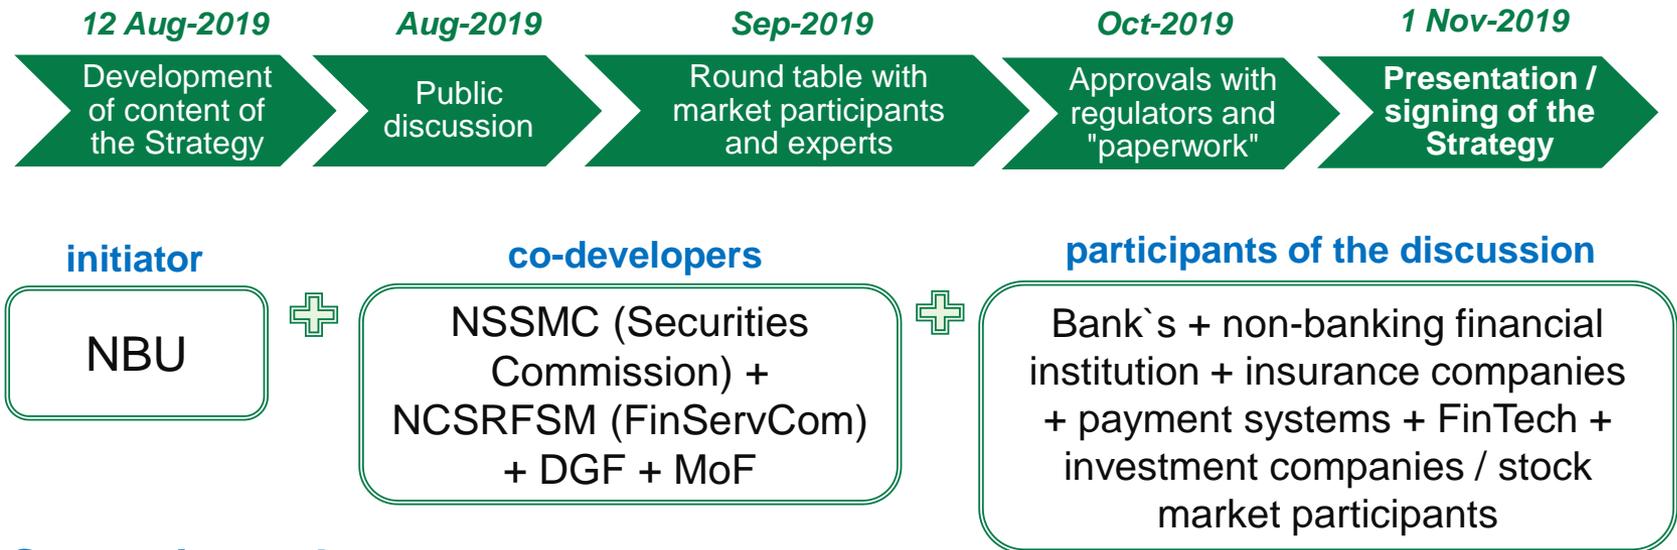

Facing the perfect storm, the National Bank of Ukraine launched a comprehensive reform of the local banking industry

- In addition to the overhaul of the banking system, the NBU simultaneously launched a radical internal transformation

Financial Sector Development Strategy 2025 brings together and coordinates regulators and market participants actions

The Strategy takes into account the present and future needs of representatives of all groups of stakeholders, both service users and financial services providers

Strategic goals:

VISION: An internationally integrated, efficient, sustainable and competitive financial sector which is dynamically developing and provides a significant contribution to Ukraine's ***sustainable and inclusive economic growth***

Key messages

- Ukraine's economy embarked on the recovery path in 2016, thanks to improved macroeconomic management, strong support from donors, and a favorable external environment
- Disinflation successfully proceeds, but its speed is altered by idiosyncratic shocks, further adjustment of administered prices and recovering wages and domestic demand. Tight monetary policy will ensure inflation falls back into the target band over the forecast horizon
- Fiscal and external sustainability have improved remarkably over the last few years, but risks remain amid threats of a full-scale global trade war and global recession
- The longer-term prospects of the economy remain strongly dependent on the realization of key structural reforms, which have to tackle major weaknesses such as the poor business climate, unfavorable demographics and deteriorating infrastructure
- NBU policy efforts will focus on securing price and financial stability, revamping the banking system and liberalizing the capital account
