

Systemic Risk Survey

May 2021

In this year's survey, respondents¹ significantly improved their assessment of the Ukrainian financial sector's current standing. The balance of responses² came in at a positive 22%, the highest since May 2018, when the surveys began. One in three respondents noted improvements in the financial sector over the past six months. Most of the polled financial institutions said that they did not expect negative changes in the next six months, while one-third of respondents said that the financial sector's performance would continue to improve. Assessments of overall risk have also improved over the past half a year, although they have stood above average. Respondents also said that the financial sector had become somewhat more resilient to high-impact adverse events. At the same time, the risk appetite of financial institutions has not changed, most respondents said.

In May 2021, the heads of financial institutions once again named the general level of corruption and the activities of law enforcement authorities and the judiciary as the main risk. However, they said that this risk had subsided. In contrast, respondents pointed to the rapidly increasing risk of Russia escalating its aggression in the east of Ukraine. This is the second consecutive survey to highlight threats to cooperation with international financial institutions as a major risk. Threats to the country's political and social situation weakened markedly, while economic risks eased compared to a year ago, when they were dominant, CEOs of financial institutions said. But they also complained that inflation risks were now significantly higher. For the second time running, respondents said that access to funding was associated with the least risk.

In May 2021, top managers at Ukraine's largest banks and nonbank financial institutions significantly improved their estimates of the financial sector's current standing. The balance of responses (+22%) came in at its highest since polling began in May 2018. Almost half of respondents rated the financial sector's current standing as good, while only 6% of executives said it was below satisfactory.

Respondents' assessments of the sector's performance improved markedly, with the share of positive assessments at three times the level of six months ago. The percentage of respondents who noticed a worsening of performance shrank to one-fifth of its previous level. Accordingly, the balance of responses moved into positive territory (+11%), up from -21% half a year earlier.

The current poll captured an optimistic view of the financial sector's prospects for the next six months. The balance of responses became positive, almost reaching the pre-crisis level of November 2019.

This is the second time running that there has been a decline in the share of respondents estimating the overall level of financial sector risk as high or very high. Despite the general improvement in risk assessments for this component, they were still above average.

Over the past six months, the share of respondents believing that the financial sector's resilience to high-impact adverse events is high or very high has surged from 9% to 20%.

The current survey has shown that corruption and the performance of law enforcement and the judiciary remain the main threats to the financial sector. A positive aspect is that the share of respondents who said that this risk factor was high or very high is the lowest since May 2018.

Over the past six months, the assessment of the risk that the military conflict with Russia may escalate has increased significantly. This is the first time that this risk has been cited among the top five risks since these polls began. Fraud, cyber-attacks, and inadequate protection of creditors' and investors' rights re-emerged in the latest survey as major threats. Risks to cooperation with IFIs also remained in the top five. Risks of going bankrupt or running into significant financial problems intensified, according to nonbank financial institutions.

The improved projections, primarily related to economic risks, reflect the Ukrainian economy's gradual recovery. The risks decreased the most in the following categories: "public economic policy," "asset value and quality of collateral," "exchange rate dynamics and volatility." Threats to the country's political and socioeconomic conditions also eased, as did risks of competition in the financial services market. Respondents rated the risks of losing access to funding as the lowest.

Overall, the risk appetite of Ukraine's financial institutions has remained almost unchanged over the past six months.

Systemic Risk Survey | May 2021

1

¹ For information on the survey, see p 5.

² Hereinafter, the balances of responses are aggregate indicators calculated as the sum of the quantities of each response to a question, which are assigned weights ranging from -1 to 1. Specifically, 1 stands for "significantly improved", 0.5 for "improved", 0 for "unchanged", and so on. A balance of responses can have a value in the range of ± 100%. A positive balance of responses means that, overall, respondents believe that the indicator has improved or the risk has eased.

Systemic Risk Survey | May 2021 4

Survey Information

In May 2018, the National Bank of Ukraine introduced a survey of the financial sector's systemic risks. This survey of financial sector risks is completed twice a year by executives from the largest banks and nonbank financial institutions of Ukraine. Central banks use such surveys to monitor how market participants perceive such risks, so as to be able to respond in good time

This report shows how top managers of financial institutions assessed the state of the financial sector over the past six months, and what they expect for the following six months. The survey was conducted from 12 through 25 May 2021. Executives from 22 banks, 12 insurance companies, and two investment firms took part in this survey. Financial institutions against which sanctions have been imposed were not surveyed. Summary results were calculated by giving equal weight to each survey response, regardless of the size of the bank/company, or its market share.

The results presented are based on the respondents' opinions and do not necessarily reflect the views of the National Bank of Ukraine.

The next report will be published in November 2021.
