

The Unmanned Aerial Vehicle Force (UAVF) is a separate branch of Ukraine's Armed Forces, which was officially established in 2024. The UAVF became the first military formation in the world to systematically use aerial, naval, and ground-based unmanned and robotic systems to perform a wide range of combat missions. The creation of this distinct branch is the result of a strategic re-evaluation of defense principles, where technology now plays a key role in achieving a strategic advantage on the battlefield.

One of the main tasks of the Unmanned Aerial Vehicle Force is to systematize and scale the accumulated experience of using unmanned systems to ensure the effective execution by units of tactical, operational and strategic missions. Integrating reconnaissance and strike capabilities with automated and unmanned technologies allows units to operate with exceptional precision and speed. Today, the UAVF is one of the leading branches of Ukraine's defense forces, relying on innovative technological solutions and asymmetric approaches to warfare.

The highest value of the Unmanned Aerial Vehicle Force is human life. In a

confrontation with a significantly superior enemy, the absolute priority is to maximize the preservation of human life and health. This approach embodies one of the UAVF's core principles: drones fight first, people only after.

The Unmanned Aerial Vehicle Force is more than just a military branch. The force symbolizes the modernization of Ukraine's Armed Forces and the formation of a new military culture where intellect and technology determine advantage, adaptability to the challenges of the modern world, and an unwavering belief in victory!

Glory to Ukraine! Glory to the Heroes!
